

EHR VS. CARDIOVISUAL

Federally mandated electronic health record (EHR) systems are quite possibly the most disliked aspect of health care, from a provider's perspective.

In case you were tempted to toss all digital medicine initiatives in the same pot, we want to dispel any thoughts you might have about CardioVisual's similarity to EHR.

CardioVisual is the free heart health app created by cardiologists that uses curated videos and graphics to explain heart problems, treatments, devices and procedures.

Check out this handy chart that clearly illustrates the differences between the dreaded EHR and the very useful CardioVisual.

EHR

Wastes time

Created by bureaucrats and geeks

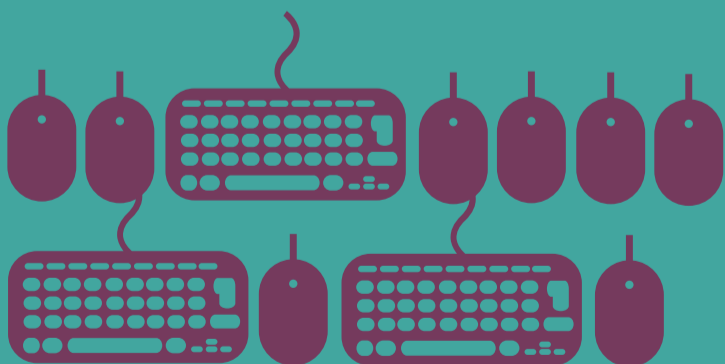

Difficult to use

Millions of dollars

Text-based

Click, click, type, type, type, click, click
click, click, type, type, click, type . . .

Pain in the %\$#%^

CARDIOVISUAL

Saves time

Created by doctors to help HCPs
and patients

User-friendly

100% free!

Video-based

Three quick taps
to the information you need

Educational
